

Communicable Disease Report Summit County January, 2021

1. Monthly Highlights/Observations:

Tuberculosis- One suspected cases of TB was reported and investigated in January, this case was determined to be atypical. SCPH CDU currently provides direct observed therapy (DOT) to 8 cases (5 cases of pulmonary TB, 2 extra pulmonary cases and 1 pulmonary / extra pulmonary). In January, 1 DOT therapy was initiated. DOT clients receive daily to monthly visits depending on side effects and where client is in treatment. All cases are complex, which requires collaboration and coordination between multiple agencies and external community services.

The CDU also investigated 1 case of coccidioidomycosis, 5 cases of CP-CRE, 16 cases of hepatitis B, 1 case perinatal hepatitis B, 1 case legionellosis, 4 cases of Lyme disease, 2 cases aseptic / viral meningitis, 5 cases of MIS-C associated with COVID-19, 1 case of pertussis, 3 cases streptococcal disease Group A, 1 case streptococcal disease Group B, 1 case of varicella infection, and 12 enteric cases (2 campylobacteriosis, 1 E coli, 3 giardiasis, 2 hepatitis A, 3 salmonellosis, and 1 yersiniosis) in January.

2. Outbreaks: 16 COVID-19 outbreaks were reported to the CDU in January, and were associated with long term care facilities, work environments, day cares / preschools, and social gatherings. Two GI-associated outbreaks in long term care facilities were also reported.

COVID-19: There were 8,372 confirmed or probable cases of COVID-19 reported in Summit County, all were investigated by the CDU staff. Investigation of COVID-19 cases includes (but is not limited to) patient interviews, contact tracing, and follow up with healthcare providers and employers. A preliminary total of 170,904 COVID-19 cases were reported in Ohio in January. COVID-19 information, a weekly COVID-19 report, and a dashboard with data for Summit County can be accessed here: <https://www.scph.org/covid>

3. ESSENCE: Epicenter is an electronic surveillance system which provides instant notification of unusual symptomatic activity at local Emergency Departments. No ESSENCE alerts were issued for Summit County during January. These alerts were investigated and were determined to be either associated with the surge of COVID-19 cases this month or not to be a public health concern. Epicenter was inactivated and replaced by the ESSENCE Surveillance System on January 1, 2021.

4. Influenza Surveillance: Surveillance for the 2020-2021 influenza season began on October 4, and the initial reports were issued on October 30. Influenza activity in January continued to be minimal, with zero positive flu tests and zero hospitalizations at reporting Summit County labs and hospitals. Data from the 2020-2021 season and previous seasons are available in an influenza dashboard, which is located on the SCPH website: <https://www.scph.org/dashboards> Weekly influenza reports may be accessed here: <https://www.scph.org/flu-surveillance-reports>

5. Vector-borne Surveillance: Vector borne surveillance ended on October 24, 2020, and the final report was issued on November 5. Copies of the reports for 2020 and previous years may be accessed at: <https://www.scph.org/vector-surveillance-reports>

Communicable Disease Reports Received, January 2021

Reportable Condition	Jan 2021	Dec 2020	Year-to- Date 2021	Year-to- Date 2020

Total	8,929	12,757	8,929	737

Notes:

- 1) This report includes the number of reports of disease received and investigated by Summit County Public Health (SCPH). This includes all reports that were determined to be probable, suspected, or confirmed. Based on case investigation, clinical diagnoses, epidemiological case definitions, and lab results, the case status may change. NR = not reported in previous year.
- 2) The Total Year-to-Date column reflects all cases of disease where SCPH is identified as the local health department in the Ohio Disease Reporting System (ODRS) as of the date that data was extracted. This includes the cases of disease entered into ODRS after last month's report was generated which will now be included in the Previous Month Revised column. Data may also vary in response to recent changes in data extraction and analysis. Because case classifications can change over time, monthly figures should not be considered final until the annual report is complete.
- 3) The number of perinatal hepatitis B cases reflect the number of infants born to hepatitis B positive mothers during the time period indicated. These infants will be followed by the Perinatal Hepatitis B Prevention Program (PHBPP) until serology indicates that the child has immunity.

For questions or comments about this report, please contact Joan Hall, MPH at (330) 926-5746 or the Communicable Disease Unit at (330) 375-2662. This report was issued on February 5, 2021.
